

Travel Companion App

Week 9 | 04/10 - 04/16

Leader: Kapil Yadav

Varun Mange Time Spent 15h	Tasks completed: • Refined the explore, destination, and place details screens • Added a weather monitor and currency converter for each destination (both backend and frontend) • Implemented the maps screen, allows the user to search destinations, show places on the map using pins and in a list • Used the user's current location to suggest nearby places • Worked on the profile page to allow users to edit their profile and connect with nearby travellers • Looked into OpenTelemetry for logging the requests/responses and performance of our backend • Experimented with various prompts to orchestrate the LLM as a travel agent • Started working on push notifications Planned tasks for next week: • Finish and integrate the Travel LLM • Deploy the APK file • Complete the navigation feature for maps • Setup push notifications • Fix any bugs/issues Any issues or challenges: • Building the app and compiling the native libraries
Allen Paul Time Spent 12 hrs	Tasks completed: • Assisted with integration and testing of Travel LLM feature. • Connected frontend components with backend for travel assistance features and recommendations. • Performed testing on user flows. Login, recommendation retrieval and itinerary building. • Improved syncing logic and reduced response delays. Planned tasks for next week: • Refine AI generated travel recommendations. • Optimize backend further. Any issues or challenges: • AI related responses sometimes made inconsistent outputs.
Darius Rafeh	Tasks completed:

Time Spent 10h	• Researched PostHog and made an account with their free tier • Implemented PostHog - Dedicated Analytics Wrapper with the following methods: identify, reset, screenView, and isFeatureEnabled - Analytics for trip creation, deletion, and item addition - Tracking for key events: user registration, trip creation/deletion, social connections: sending/accepting social connect requests. - Analytics events for pack generation and sync conflicts Planned tasks for next week: • Test PostHog features with test cases • Continue working on Maps Screen Any issues or challenges: •
Kapil Yadav Time Spent 13h	Tasks completed: • Integrated TanStack Query offline persistence with AsyncStorage so all previously visited screens serve cached data when the device is offline • Wired the Social Connect screen to the real backend API, replacing all mock/hardcoded data with live nearby traveler discovery, connection requests, and accept/reject flows • Wired the Messaging screen to the real backend API with live message fetching, sending, read receipts, and 5-second polling for new messages • Built an offline mutation guard system that blocks all write actions (create, edit, delete) across trip and itinerary screens with a user-friendly alert when offline • Fixed a broken useDebounce import on the trip creation screen that was missing after the last main branch merge Planned tasks for next week: • Any issues or challenges: •

Total Time Spent: 50h

Summary: We added the maps screen and improved on the explore/places screens. We added PostHog analytics to our application. We switched to tanstack query for offline persistence and connect the social connect backend and frontend. We started work on the AI assistant and tested it with different scenarios.
