

Travel Companion App

Week 10 | 04/17 - 04/23

Leader: Kapil Yadav

Varun Mange Time Spent 12h 30m	Tasks completed: • Improved upon the UI of profile, settings, and explore screens • Made minor bug fixes and accounted for edge cases/border conditions • Added the functionality to allow the user to change their profile pictures • Improved the messaging screen and messaging backend logic • Started integrating the AI assistant into the app Planned tasks for next week: • Turn by turn navigation to places • Integrate google maps places API to get details of destination/places that are not in our database Any issues or challenges: •
Allen Paul Time Spent 13 Hrs	Tasks completed: • Worked on testing and optimization tasks. • Helped improve backend query performance and reduce unneeded API calls. • Debugged some frontend/backend integration issues. • Made sure app features worked well across multiple test scenarios. Planned tasks for next week: • Do additional performance testing on API endpoints related to trips, recommendations and itinerary retrieval. • Test JWT auth. Any issues or challenges: • Larger datasets caused performance slowdowns.
Darius Rafeh Time Spent 11h	Tasks completed: • Tested during run-time that the following events were correctly being tracked and were shown on the Posthog Activity Page: user registered, trip created, trip deleted, itinerary item added, offline pack downloaded • User is identified through userID, identified from auth and resets on sign-out • Added tracking for key events: user registered, trip created, trip deleted, itinerary item added, offline pack downloaded, LLM

	downloaded, chat message sent, connection request sent, connection accepted • Implemented Screen View Tracking: Tracks every screen transition from the user, shown on posthog activity page • Server-side only events for when a user completes pack generation and for sync conflicts • Feature Flags Planned tasks for next week: • Rest of Phase 5: Error Handling and Performance Optimization Any issues or challenges: •
Kapil Yadav Time Spent 13H	Tasks completed: • Added a Share Trip button on the trip detail screen that generates a clean formatted itinerary summary (with dates, times, completion status, and progress) and opens the native share sheet • Built notification preferences system end-to-end: added notifyMessages and notifyConnections fields to the User model with a database migration, updated the user API to support toggling them, and wired the push notification sender to check preferences before delivering notifications • Added notification preferences UI in the Settings screen with toggle switches for message and connection notifications • Wrote backend tests for the weather service covering forecast responses, day clamping (min 1, max 16), default day count, and custom timezone support • Wrote backend tests for the currency service covering supported currency listing, field validation, rate fetching for valid codes, and 404 rejection for unsupported codes • Wrote backend tests for the social/connection service covering self-connect rejection, socialOptIn enforcement, connection creation, duplicate conflict detection, accept/reject flow, and receiver-only permission checks Planned tasks for next week: • Any issues or challenges: •

Total Time Spent: 49h 30m

Summary: We continued working on the AI features, fixed the UI and added profile picture upload. We setup up PostHog to collect analytics on the frontend. We built push notifications and a trip share feature. We continued to optimize our apis.
