

Travel Companion App

Week 11 | 04/24 - 04/30

Leader: Kapil Yadav

Varun Mange Time Spent 14h 30m	Tasks completed: • Worked on the AI assistant, tested several models, and settled on using the Gemma 2 2B model. • Created two different modes - Plan and Assist. The plan mode creates an itinerary for the user based on their preferences. The Assist mode answers general travel related questions and is aware about the user's travel. • Fixed refresh token logic on the frontend • Added Google OAuth on the frontend • Optimized the maps screens • Added logging, metrics, and uptime monitoring using OpenTelemetry and BetterStack. • Added support for turn-by-turn navigation Planned tasks for next week: • Work on the final report and presentation • Fix any bugs in the app and validate everything works as expected • Build the .apk file and upload it for sharing Any issues or challenges: •
Allen Paul Time Spent 15 hrs	Tasks completed: • Helped test major app features such as itinerary planning, recommendations, offline access and map functionality. • Reviewed deployment readiness. • I worked on the presentation • Identified and fixed remaining bugs and some edge cases. Planned tasks for next week: • Ensure backend services remain stable during final demo. • Review github docs, API docs and testing results. Any issues or challenges: • Final testing revealed some small issues that required quick fixes.
Darius Rafeh Time Spent 10h 30m	Tasks completed: • Changed FlatList to FlashList components for the following screens: connection, profile, language guide, currency select, and onboarding • Implemented lazy tab loading and hydration techniques • Integrated Sentry for crash reporting

	• Error Boundaries wrapped on top-level screens. Fallback UI included • Test Cases for Utility Behavior, Sentry Error Handling, Onboarding Screen, Auth Screen, Tabs. Test cases expanded to simulate env dependencies/api. All 5 test suites passed with the results: statements:83.75%, branches: 70%, functions 78.57%, lines: 82.89% Planned tasks for next week: • Any issues or challenges: •
Kapil Yadav Time Spent 13H	Tasks completed: • Trip countdown hero card on home screen showing days until departure or current day progress for active trips • Inline completion toggle on itinerary tab so you can mark items done without leaving the screen • In-memory API caching for destinations, places, weather, and currency endpoints with TTL expiry • Global error boundary wrapping the app with a crash fallback screen and retry button Planned tasks for next week: • Any issues or challenges: •

Total Time Spent: 56h

Summary:

Finished integrating the AI features. Setup up OpenTelemetry with BetterStack for logging/metrics collection. Made some UI improvements/optimizations. Continued fixing bugs.
