Note Taker: Varun Mange

Attendees	Absentees
Varun Mange Allen Paul Darius Rafeh Kapil Yadav	None
Dr. Alagar - Sponsor Adarsh Gella - Advisor	

Activities Undertaken

- Went over our CI/CD, deployment, and VPS setup
- Try to use AI to create all the remaining features based on the specs, iteratively run test cases, and the AI will automatically fix all the issues without user input.
- Make the AI do the entire feature end-to-end and merge into the main branch.
- We will use Qwen 3.5 0.8B parameter model for offline AI chat
- Identify and test a complete workflow of our application. Find any gaps in the user experience
- Demoed the social connect and itinerary builder features

Next steps / TODOs

- Add analytics with PostHog to track the user flow and find issues
- Add caching both client and server side
- Maybe - verify the user email using a verify link
- Deploy - both frontend and backend - make it accessible for a demo
- How will we tackle 100,000 simultaneous users? Prepare a document.
- Decide whether to scrape places data or use Google places API
